

Dietitians promote health through food and nutrition

Collaborative. Evidence-based

Evidenced Based Practice

Dietitians translate complex scientific evidence into practical solutions to promote health and manage special health conditions such as diabetes, heart disease, cancer, allergies and obesity.

Collaborative approach

Dietitians are valuable members of the health care team, working collaboratively with other health care professionals including doctors, nurses, physiotherapists, and speech language pathologists.

Dietitians individualize information, care plans, and programs to meet the unique needs of clients and communities.

Regulated health professionals

Dietitians are regulated health professionals. The title 'dietitian' is protected by law, just like physician, nurse and pharmacist. Nutritionist is not a protected title – that means anyone can use it.*

You can identify a dietitian by the initials RD or PDt after their name. To use these titles, the dietitian must meet and maintain provincial registration requirements.

**except in Alberta, Quebec and Nova Scotia*

***except in Quebec*

Dietitians work in diverse roles and environments

Dietitians work in the community, health care, food services and private practice as:

Practitioners: specializing in working with individuals and groups to improve eating habits and address the nutritional needs of people with complex health problems to improve health outcomes

Policy Makers: advising government at all levels on population health strategies and regulatory measures

Leaders: in all aspects of food systems, including food security and sustainability, food service management, production and marketing

Knowledge Brokers: conducting research, answering questions and translating science into best practices

Educators: of health professionals, school teachers, fitness instructors and future dietetic professionals

University-educated

Dietitians are university educated with at least 1250 hours of supervised, hands-on training in food systems, disease management, population health, communications and counselling. They must pass a registration exam to become a regulated health professional.**

Ongoing professional development is not only a core value but a requirement.
